 - Designed the UI for the Home Page
 - Enhanced the Design System and implemented components using the same
 - User focused design to guide them through the most essential features
 - Responsible for Motion Design along with Visual and Interaction Design

Projects

- Mutiny - A Gamer's Den**

Problem Statement

Competitive gamers require a way to manage track, and schedule their upcoming matches with ease.

The Product

A platform that assists gamers to schedule and track their upcoming matches, connect with players through clans. Moreover, it allows gamers to buy and manage their games.

Objectives and Goals

Design a Desktop application that combines the functionalities of scheduling, buying, and managing games, contacting players, and forming clans to deliver an integrated experience to gamers.

My Roles

UX Researcher and UX Designer, from conception to delivery
- BBQ Food Customization App**

Problem Statement

People with cramped working schedules do not have the time to prepare their meals.

The Product

BBQ is an app that has associations with the best BBQ franchises. BBQ strives to deliver customizable BBQ meals to people with busy schedules who lack the time and ability to prepare meals and people who enjoy trying out new food.

Objectives and Goals

Design an app using which customers can customize their BBQ meals according to their liking.

My Roles

UX Researcher and UX Designer designing a BBQ Food Customization App from conception to delivery
